About Us

Web: www.h2o-c.com

Carbon Negative capitalizes on the expertise of our scientists and partners in sustainability, attained over many years of work at contract research organizations, environmental companies, government, and academia. Carbon Negative is dedicated to excellence in helping our customers achieve their environmental and sustainability goals, including groundwater and carbon management .

Core Competencies

We offer complete geological resource evaluation with specific expertise in the modeling of the solid (3D subsurface reconstruction), groundwater flow, and contaminant fate-and-transport, as well as aquifer testing, water quality assessment, treatment, and compliance. We conduct environmental forensics including isotopic methods. We evaluate saline aquifers and reservoirs that may be suitable for carbon storage, or may provide compounds for carbon mineral sequestration or enhanced biological carbon uptake.

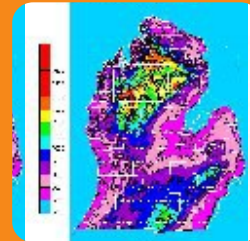

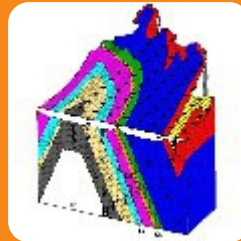

Primary Services

Geological Investigation

- Geological subsurface reconstruction
- Groundwater supply and remediation

Groundwater Modeling and Forensics

Water Quality Assessment and Treatment

Contract Research Services | Environmental Remediation

NAICS & Product Service Codes

- 541620 – Environmental Consulting Services
- 541712 – R & D in the Physical, Engineering, and Life Sciences
- 541360 – Geophysical Surveying and Mapping Services
- 541370 – Surveying & Mapping (Except Geophysical) Services
- 541511 – Custom Computer Programming Services
- A - Research & Development
- R - Support Services (Professional)
- 76 – Books, Maps, and other Publications

Corporate Data

Our scientists can work as either prime or subcontractors on your projects. Whether it's a regional water supply investigation or a local groundwater clean-up, we use groundwater and other modeling techniques to evaluate the best water development or treatment options available. We evaluate well yields, the fate-and-transport of contaminants, and the availability of both the water and its dissolved natural chemical compounds. Environmental solutions require talent across many disciplines. We are partnered with experts in alternative energy and ERW technology.

Differentiators | Value Add

We deploy available alternative energy on-site and make use of existing natural resources with ERW technologies to make hydrogen, alkalinity, acids, and reactive oxygen species (ROS) as products, or for use in water treatment.
